

HydraBCS®

Biometric Capture System

HydraBCS® is a Biometric Capture System that can be used to capture the complete biometrics of an individual namely; fingerprint, face, Iris and signature. This product was developed to meet the growing need of biometric systems in the country in area of ghost worker elimination. This product can also be used to for biometric enrolment and capturing data that will be used for biometric card printing. Biometric data is captured in compliance to standards already set by the International Standard Organization (ISO).

The HydraBCS® can capture iris information with any of the widely available iris scanner. HydraBCS® can also be used to capture signature data. Though this data is not used for any form of biometric verification, it is very useful when signatures are to be reproduced on cards or any other document so required. It can be used with a great number of signature pads.

The biometric capture client is available in
**DESKTOP AND
MOBILE VERSIONS**

Key BENEFITS

- Flexibility, Security & Robustness
- User-defined Deployment Strategy
- Centralized & Distributed Data Storage
- Single Enrollment and Multiple Verification Design Model
- Enterprise Reports and Dashboards
- Adaptable for Biometric Time & Attendance (BTA), Ghost Worker Elimination, Nominal roll and KYC (Know Your Customer) projects
- 3rd party Integration Capabilities
- Unique Biometric ID and verification
- E-governance Framework
- Cost Savings and Increased ROI
